

Full Name: Joe Duong

Title: Software Developer and QA/Automation Engineer | Seattle, WA

Contacts: joeduong.dev@gmail.com | (253) 394 4284

Profiles: <https://www.linkedin.com/in/joe-duong/> | <https://www.upwork.com/freelancers/joeduong>

PROFESSIONAL SUMMARY:

- 8 years of experience in the tech industry consisting of both front-end, back-end, QA and project management work.
- Top Rated Plus Freelancer on Upwork with 100% job success rate and over 5000 hours billed since 2021. Ranked top 3% of all Upwork talent. I run an IT consulting service to help clients plan and build their projects and guiding them to the finish line with my experience.
- Leading 3 different teams of various sizes by getting client stories, turning them into tasks, designating responsibilities, organizing meetings, creating documentation, and facilitating workloads. I know how to evaluate a project and spend resources accordingly to achieve the best value for my clients.
- Certified Scrum Master from Scrum.org since 2019. I have led and organized Scrum meetings and daily stand ups. I have a strong understanding of the Agile Software Development Cycle and Scrum practices.
- Designed over 20 web sites and apps that are slick and functional with Figma, Webflow, Wordpress.
- Can build complex and sophisticated systems with React, JS, Node, NPM and API integrations.
- Performing manual, regression, black or white box, smoke testing as well as automated testing and documenting them through JIRA, Confluence and TestRail.
- Creating and maintaining databases, optimizing queries and extracting data and turning them into reports.
- In charge of maintaining and updating over 200 Confluence documents to help the dev team and other Project Managers keep up with new features, development and releases.

EDUCATION AND CERTIFICATIONS:

- Green River College (2012 - 2016): Bachelor of Applied Science – Software Engineering.
- Certified Scrum Master from Scrum.org (2019).

PROFESSIONAL EXPERIENCE:

Upwork - Remote | <https://www.upwork.com/freelancers/joeduong>

Software and QA Engineer (Sep 2021 – Present):

- I work as a freelancer and offer my skills in consulting, programming, QA and project management to help my client with their dream projects. I have over 40 different projects completed and counting.

iService/DealerBuilt - Remote | <https://www.dealerbuilt.com/>
QA/Automation Engineer (Jun 2022 - Nov 2024):

- Working on the ever-evolving DMS (Dealer Management System) app for iService/DealerBuilt. This system allows dealerships and customers to communicate with each other, including booking appointments, getting a quote, messaging, reporting and ordering parts or payments.
- Performing both manual and automated tests alongside regression tests, smoke tests, batch testing, device certifications, bug tracking and feature verifications.
- Writing and documenting test cases and acceptance criteria to measure product readiness for launch.
- Designing automated test cases with Playwright and JS to cover different aspects of the system.
- Testing data integration between iService system and Dealerbuilt's Lightyear system.
- Testing new features through different branches through Vercel deployments.
- Creating documentation with Confluence and JIRA tickets.

Audere - Seattle, WA | <https://www.auderenow.org/>
QA/Automation Engineer (Jan 2022 - June 2022):

- Working on the development of different mobile and web apps, which utilizes Computer Vision AI to analyze 17 different RDTs (Rapid Diagnostic Tests) with device cameras and report them to the server.
- Working on daily mobile app builds and reporting any found issues through JIRA with throughout documentations, screenshots and reproduction.
- Taking adversarial batches of photos to test out AI accuracy and generating JSONs to analyze the results, filing the results on TestRail to create new test scenarios then documenting the results with Confluence.

VECA Electrics and Technologies - Seattle, WA | <https://www.veca.com/>
App Developer (May 2017 – Sep 2021):

- Designing both front-end and back-end systems using HTML, CSS, JavaScript, SQL tables, views, stored procs, SQL agents, REACT, C# and XML.
- Creating a company timecard app that is used daily by over 800 field electricians to record time spent per task each day and different shift types.
- Creating a payroll/accounting app that transforms data collected into the correct format to be exported into Excel and imported into the company's payroll system.
- Creating material and tool requisitions app to help field users order items in a timely manner. The app will keep track of order statuses (pending, processed, out of stock, delivered...) and notify the users.
- Writing complex SQL queries for data collection, analysis and BI. Designing dynamic and scalable forms with SSRS. Automating emails to users using SQL Server Agent.
- Working closely with the company executives to plan, manage and facilitate projects.
- Managing the dev team and guiding them through tasks and goals.
- Training users to use new releases of our apps and communicating with beta testers to document user stories and develop them accordingly.
- Implementing each app with a good error handling system as well as data patching/scrubbing to ensure the receiving data is always correct and ready to be processed, despite human errors.

SOFT SKILLS:

- Bilingual in English and Vietnamese.
- Good communicator, both verbally and in writing. Often taking part in documenting software and company internal rules.
- Excellent leadership and project management skills. Can plan, schedule, manage and facilitate projects.
- Flexible when approaching a problem, opening to using different methods and thinking out of the box to finish an objective.
- Motivated and value self-growth. I love any opportunity to learn and be better.
